## **MY STUDENT TUTOR, LLC INTRODUCES *SUMMER SCHOOL @ HOME***

### ***INTERACTIVE ONLINE MATH TUTORIAL PROGRAM HELPS ELEMENTARY GRADE STUDENTS SUCCEED***

Washington, DC, May 21, 2008 – **MyStudentTutor.com (MST)** is announcing the introduction of *Summer School @ Home* an innovative and interactive online math summer tutorial program for grades 3 - 6.

Summer is almost here, and the school year will be over. While elementary school students are looking forward to their summer vacations with excitement and anticipation, parents are still concerned about the past academic year. Many parents are asking themselves:

1. Will their children pass next year's elementary math classes?
2. What can they do to improve their children's elementary math grades?
3. How can they get their children off to a fast start in math the next school year?

*Summer School @ Home* was designed to answer these questions. [Students can only sign up](#) during the summer [months](#), starting in May and lasting until the first week in September. The program includes MST's diagnostic test and tutorial lessons based on the student's **MST-generated Student Tutorial Plan**. *Summer School @ Home* succeeds as a tutorial program because of the following benefits:

**Convenience** – Students are able to study when it is most convenient for them.

**Interactive** – Students are active participants in the learning process by having to interact directly with the lessons.

**Private** – Students can study without embarrassment of failing or peer pressure.

**Progression** – Students can proceed and learn at their own pace.

**Practice, Practice, Practice** – Students can go over the lessons as many times as it takes them to understand the mathematical concepts and principles.

*Summer School @ Home* ensures that while your children are enjoying their summer vacations, they are also:

1. Not **forgetting** the math concepts and principles taught the past school year.
2. Able to **practice and practice** some more in their weakest areas of math.
3. Able to start the school year off without having to **review** last year's math.

**MST's** curriculum was developed by incorporating guidelines taken from California's Content Standards and Content Frameworks; Florida's Mathematics Standards; Maryland's Voluntary State Curriculum; and the National Council for Teachers of Mathematics' Principles and Standards for School Mathematics.

**MST's** lessons are standards-based, and were reviewed and evaluated by over 15 County and State elementary math "**Teacher of the Year**" awardees.

**MyStudentTutor.com** is a service of **My Student Tutor, LLC (MST)**, a Maryland corporation, organized for the purpose of using the Internet technology as a means for providing convenient, inexpensive and curriculum approved tutorial lessons. **MST** currently offers diagnostic testing and tutorial lessons in Mathematics for students in grades 3 through 6. The lessons consist of arithmetic exercises and problem-solving skills broken down into six instructional subject units within each grade. **MST's** curriculum, lessons and test questions were developed by educators with Ph.D.s and Masters, and years of teaching experience in Mathematics.

**My Student Tutor's** corporate objectives are:

1. Assist elementary students in building an educational foundation for the future.
2. Provide an educational service that is convenient and easy to use for students, parents, guardians and teachers.
3. Provide personalized standards-based content instructional tutoring for each student.
4. Provide tailored lessons to accommodate all students, including No Child Left Behind.
5. Provide constant feedback and communication to parents, guardians and teachers regarding their students' progress.
